

# Requirements Mapping Table

## Web-Based Enrollment System with Student Profiling for Senior High School

| Requirement Type | Requirement Description             | Proposed Feature                           | Expected User Action                  | UML Diagram        |
|------------------|-------------------------------------|--------------------------------------------|---------------------------------------|--------------------|
| Functional       | Secure login for authorized users   | Authentication & Role-Based Access Control | Admin/Staff enters credentials        | Use Case, Sequence |
| Functional       | Manage student enrollment records   | Enrollment Management Module               | Admin encodes/updates/deletes records | Use Case, Activity |
| Functional       | Store complete student profiles     | Student Profiling Module                   | Admin encodes student data            | Class, Use Case    |
| Functional       | Track student status                | Student Status Management                  | Admin updates status                  | Activity Diagram   |
| Functional       | Retrieve student information        | Student Information Retrieval              | Admin searches records                | Sequence Diagram   |
| Functional       | Manage strand and section           | Strand & Section Management                | Admin assigns strand/section          | Class, Use Case    |
| Functional       | Generate enrollment summaries       | Reporting Module                           | Admin generates reports               | Use Case           |
| Functional       | Generate printable student profiles | Profile Report Generator                   | Admin prints/export profile           | Class, Report Flow |
| Functional       | Generate class lists                | Class Listing Module                       | Admin selects strand                  | Use Case           |
| Functional       | Centralized database storage        | Database Management System                 | System auto stores data               | Class, Deployment  |
| Functional       | LAN-based access                    | LAN Architecture                           | Access within school network          | Activity Diagram   |
| Functional       | Document upload module              | Document Upload Module                     | Student uploads requirements          | Sequence Diagram   |

## Non-Functional Requirements

| Requirement Type | Requirement Description                              | Proposed Feature          | Expected User Action                          | UML Diagram        |
|------------------|------------------------------------------------------|---------------------------|-----------------------------------------------|--------------------|
| Non-Functional   | Centralized system for efficiency                    | Centralized Architecture  | Users access single system                    | Deployment Diagram |
| Non-Functional   | Security and privacy                                 | Role-Based Security       | Login based on role                           | Sequence Diagram   |
| Non-Functional   | User-friendly interface                              | UI Design                 | Simple navigation                             | Activity Diagram   |
| Non-Functional   | Reduce manual processing                             | Digital Processing System | Encode electronically                         | Activity Diagram   |
| Non-Functional   | Web-based access                                     | Web Platform              | Access via browser                            | Deployment Diagram |
| Non-Functional   | Data integrity                                       | Database Integrity        | System validates data                         | Class Diagram      |
| Non-Functional   | Fast report generation                               | Optimized Reporting       | Generate reports quickly                      | Sequence Diagram   |
| Non-Functional   | Scalability                                          | Scalable Design           | Handles multiple users                        | Deployment Diagram |
| Non-Functional   | The system shall support web-based enrollment access | Online Enrollment Module  | Student fills out enrollment form via browser | Deployment Diagram |
| Non-Functional   | Improved efficiency                                  | Process Optimization      | Faster transactions                           | Activity Diagram   |
